SUMMARY

Frontend-focused software engineer with 10+ years building and shipping quality products, with deep experience in React and Javascript, complex product workflows, and improving existing codebases. Energized by creative work, thoughtful product decisions, and open, collaborative teams.

SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Java, HTML5, CSS3, Sass • **Frontend:** React, Vue.js, AngularJS, RxJS, Redux, Storybook, TailwindCSS • **Backend & Data:** Node.js, REST APIs, MySQL • **Testing:** Jest, React Testing Library, Cypress • **Tooling:** Git, CI/CD, Figma, Datadog, Rollbar, Metabase • **AI-Assisted Development:** Cursor, GitHub Copilot, Gemini, Claude Code • **Strengths:** Frontend Architecture, Technical Leadership, Cross-Team Collaboration

EXPERIENCE

Software Engineer II ALMA

May 2021 – July 2026

- Drove adoption by 4,500+ providers within 30 days by leading technical scope and implementation of a new appointment cancellation workflow spanning provider and client experiences, built in React and TypeScript
- Spearheaded voluntary multi-factor authentication enrollment past 14,000 providers via a phased launch across the React/TypeScript frontend and Python backend
- Reduced complexity in the Provider Calendar, one of the hardest areas of the codebase, through targeted refactoring of reusable React components rather than an open-ended rewrite
- Anchored a newly formed greenfield team as its only experienced Alma engineer, building the core React frontend for a payer billing system from early discovery through development
- Enabled Alma's transition off its third-party billing vendor (Kareo) by building claim forms and validation in React for its replacement native system, streamlining work for Insurance Operations teams
- Onboarded four frontend engineers, authored a Frontend Architecture Rubric used for standard onboarding documentation, and founded a monthly cross-team "Munch and Learn" series

Frontend Engineer BLACKFYNN

July 2018 – April 2021

- Expanded reach into the broader scientific research community by developing scalable web applications in Vue.js, Nuxt.js, and JavaScript
- Rebuilt an NIH-funded open-science research platform as a responsive Nuxt.js application, improving maintainability and expanding access to biomedical research data
- Reduced technical debt by 80% by refactoring legacy Polymer components into Vue.js
- Improved release confidence and reduced production defects by building comprehensive unit and end-to-end testing coverage

Web Developer II UNITEDHEALTH GROUP – OPTUM

June 2016 – July 2018

- Delivered scalable, high-quality releases for healthcare provider-facing workflows by building frontend applications in AngularJS, JavaScript, HTML5, and CSS3, partnering with product, design, and QA
- Supported scalable application integrations by building Java REST APIs and backend services
- Increased team throughput by 30% by championing a Selenium testing and email reporting pipeline that eliminated manual UAT processes
- Reduced manual testing effort by developing automated tools to generate security tokens and integrate API validation

EDUCATION

RUTGERS UNIVERSITY
Bachelor of Arts in Information Technology and Informatics, Minor in Computer Science

May 2014
